Design and synthesis of various conjugated multistep molecules for photovoltaic application and various projects during industrial (R&D) experience

Pedada Srinivasa Rao

HPCL Green R&D, Bangalore

My presentation talk includes various projects that I have handled during my doctoral study, design and synthesis of multi-step molecules. I will explain about how we overcome several problems that we faced during synthesis, the characterisation and evaluation of those synthesized molecules for photovoltaic application. Further, I will discuss about different projects that I have handled during pharma industry experience. Furthermore, I will describe what type of projects that I am handling currently in HPCL R&D.
