

How to install SSL VPN Client - NetExtender - on – Ubuntu Linux

1. Download the required 32 bit or 64 bit script from the following link

https://tifrh.res.in/webdata/documents/events/facilities/vpn/vpn_linux_64.sh
https://tifrh.res.in/webdata/documents/events/facilities/vpn/vpn_linux_32.sh

2. Go to the directory in which the script got downloaded and execute the following commands.

```
$ cd ~/Downloads
```

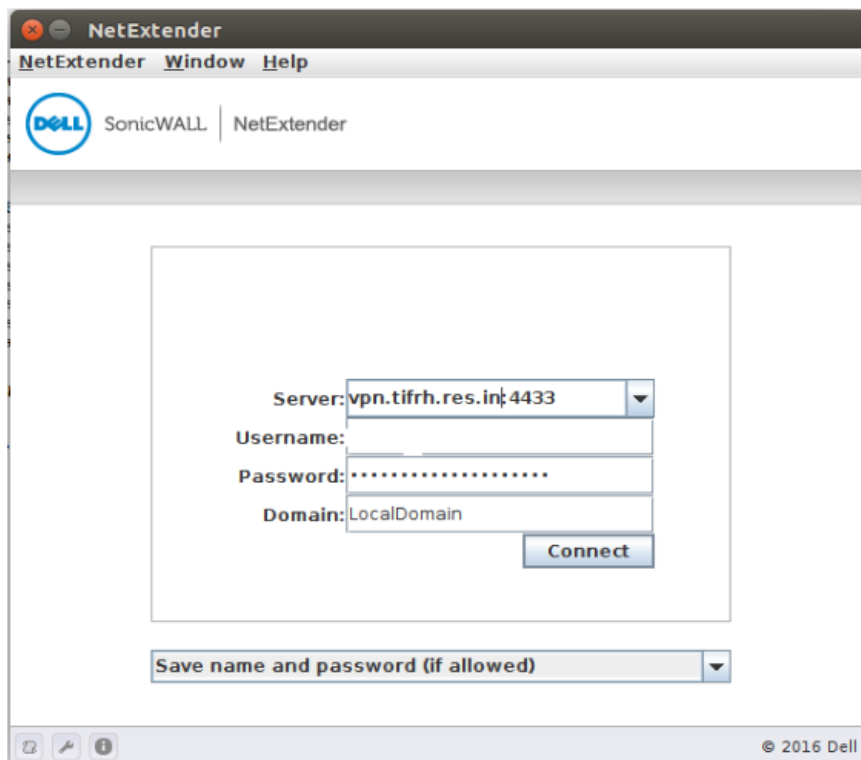

```
$ bash vpn_linux_32.sh # for 32 bit
```

```
$ bash vpn_linux_64.sh # for 64 bit
```

3. To open the NetExtenderGUI, search in applications for the same or type the following command in the terminal

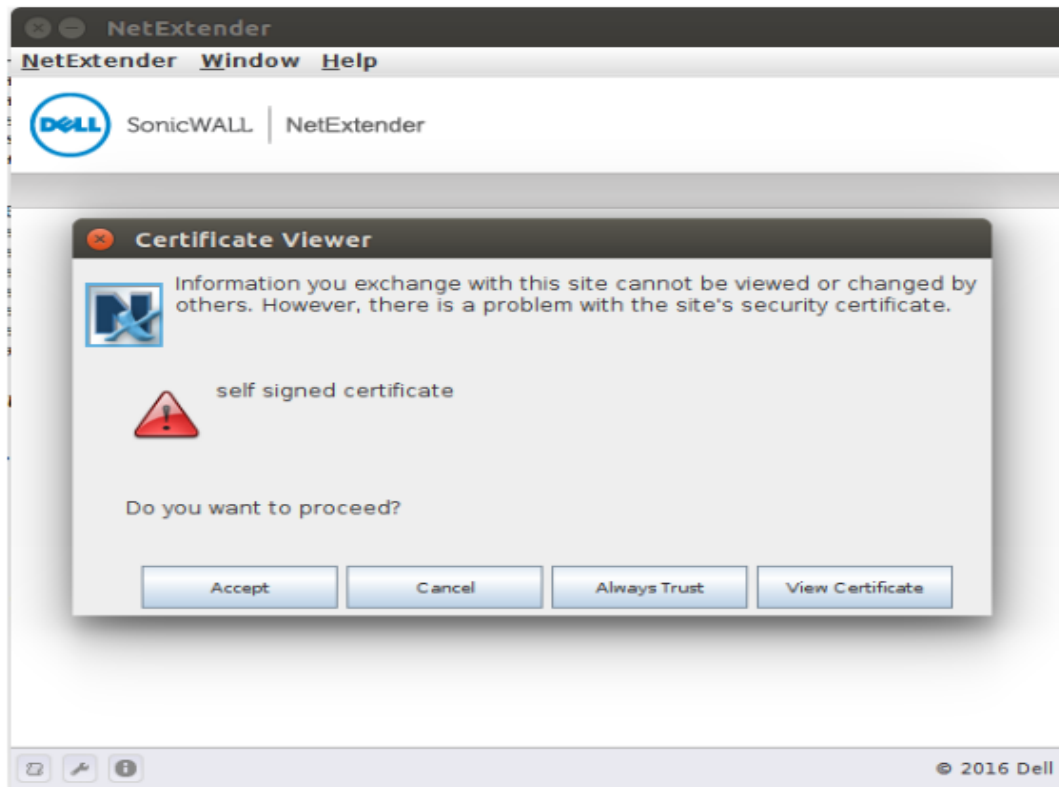

```
$ netExtenderGUI
```

4. Please fill in the required credentials with following details in the VPN and save the profile

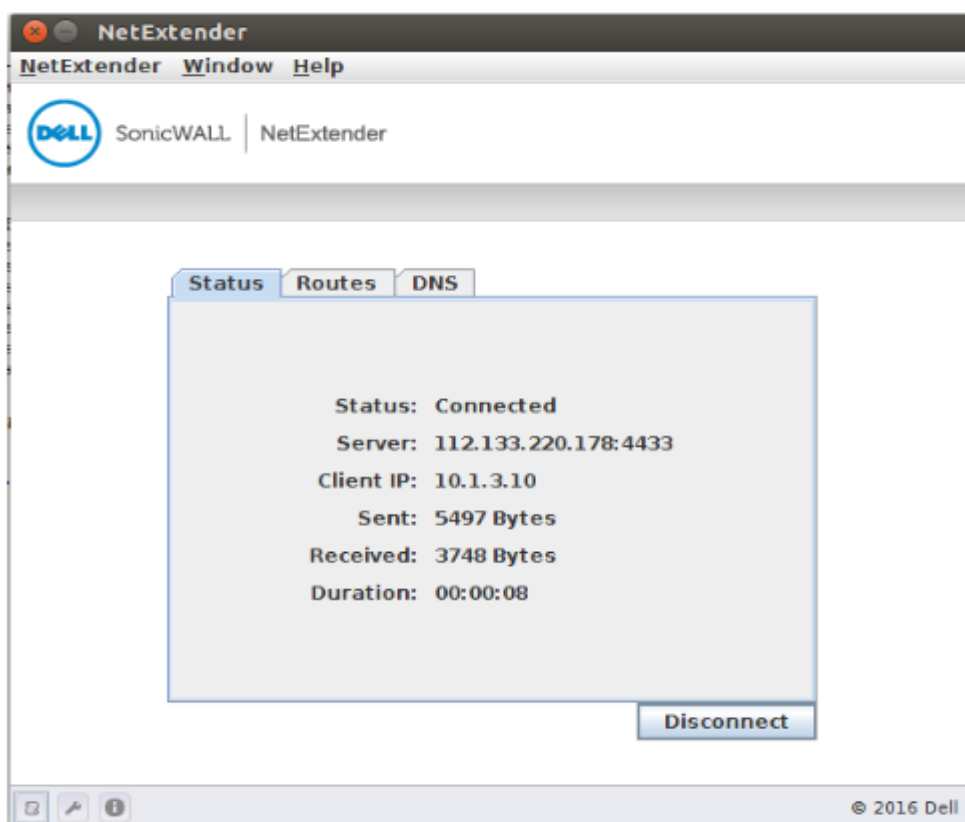

server : vpn.tifrh.res.in:4433
Username : Your Username
Password : Your Password
Domain : LocalDomain

and then click on Connect

Click on "Accept"

5. Now you are connected to the TIFR-H network.
