Colloquium

Demystifying AIML

C V Jawahar

IIIT, Hyderabad

We have been hearing a lot about AI (artificial intelligence) and ML (machine learning) in recent years. It has impacted the way we do live and even research. Many of these disruptions can have long term impact. We have been also hearing many positives and sometime negative of AI. Many real success stories; and some hypes too.

In this lecture, we do a quick tour of some of the basic ideas of ML (or AI) that got widespread attention in the last decade. The talk is primarily aimed at non-AIML students and faculty, especially those who may want to use AIML in research in the future.

Monday, Mar 4th 2024

16:00 Hrs (Tea / Coffee 15:45 Hrs)

Auditorium, TIFR-H
