Calcium and Redox signalling mediated vascular dysfunction in type-2 diabetes

Velmurugan Gopal Viswanathan

TCIS, Hyderabad

Type-2 diabetes is a global health problem. 75% of the people diagnosed with type-2 diabetes happen to have hypertension and other cardiovascular complications. In my talk I will discuss about diabetes induced vascular complications, possible signalling mechanisms involved and the feasibility of rescuing normal physiological function using pharmacological compounds.

Thursday, Nov 19th 2015

4:00 PM (Tea/Coffee at 3:45 PM)

Seminar Hall, TCIS
